1. Create your static website: Prepare your HTML, CSS, JS, and image files.

2. Sign up for Cloudflare: Create a free account here.

3. Add your site: Log in, click "Add a Site", and enter your domain name. Confirm DNS records.

4. Update nameservers: Change your domain's nameservers to the ones provided by Cloudflare.

5. Configure DNS: Add an `A` record pointing to your web host's IP address.

6. Upload website files: Use a hosting provider (e.g., GitHub Pages, Netlify, Vercel).

7. Enable Cloudflare features: Turn on CDN, SSL/TLS, Auto Minify, and Brotli compression.

8. Test your site: Ensure it's accessible via HTTPS and Cloudflare's CDN is active.
